Configure Networks

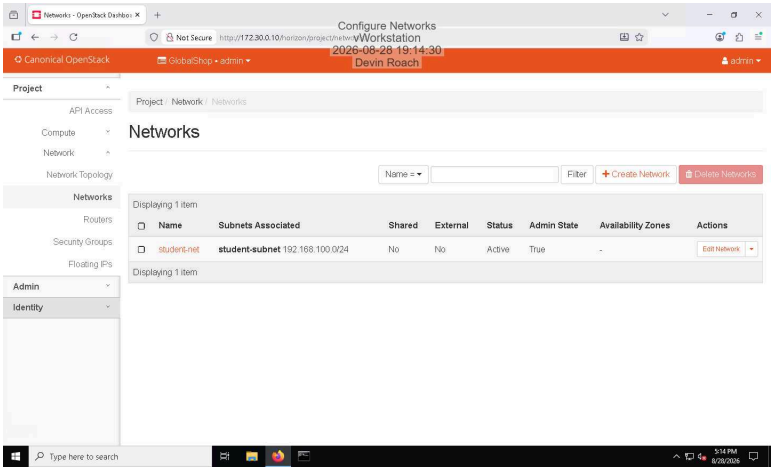

Fundamentals of Cloud Security, First Edition - Lab 01

Student: Devin Roach
Email: devin.roach@siu.edu
Time on Task: 2 hours, 15 minutes
Progress: 100%
Report Generated: Thursday, September 10, 2026 at 9:08 PM

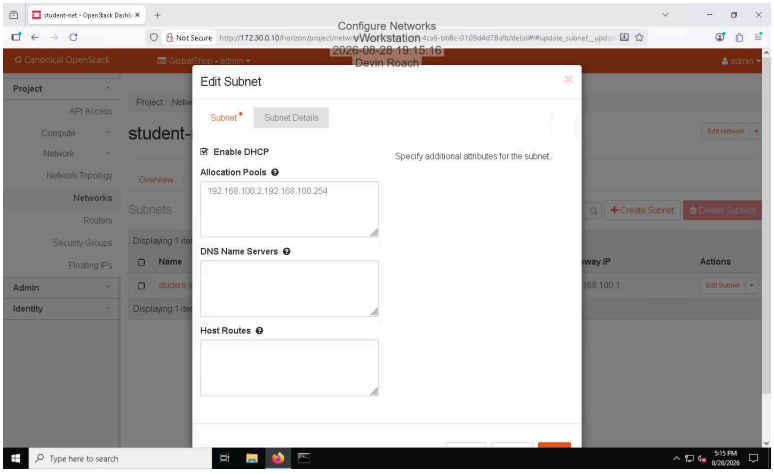

Section 1: Hands-On Demonstration

Part 1: Build Your First Network

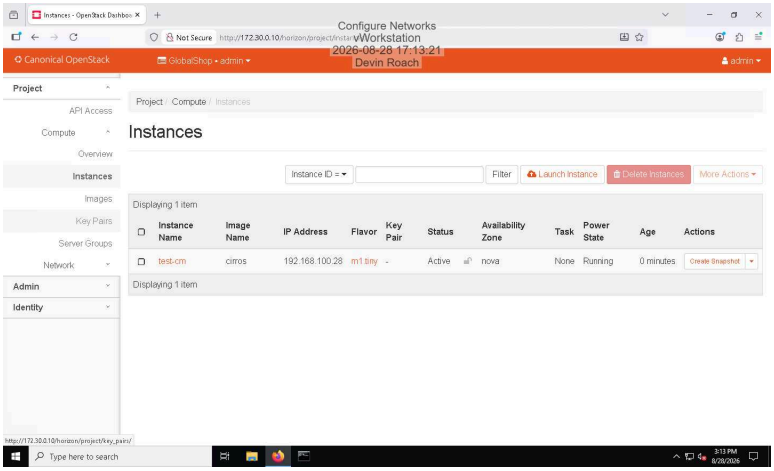

9. **Make a screen capture** showing the **student-net listed under Project > Network > Networks with status "Active"**.

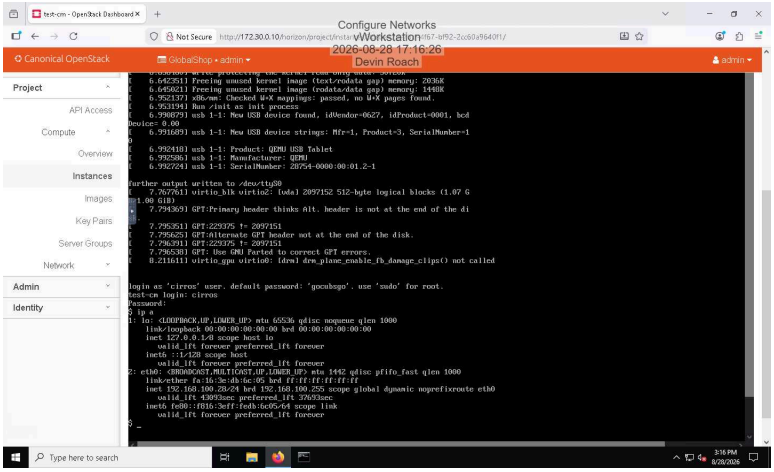

11. **Make a screen capture** of the **Edit Subnet -> Subnet Details** tab showing the **CIDER 192.168.100.0/24** and the **Enable DHCP** option selected.

21. **Make a screen capture** showing the **test-vm listed under Project > Compute > Instances with status "Active"**.

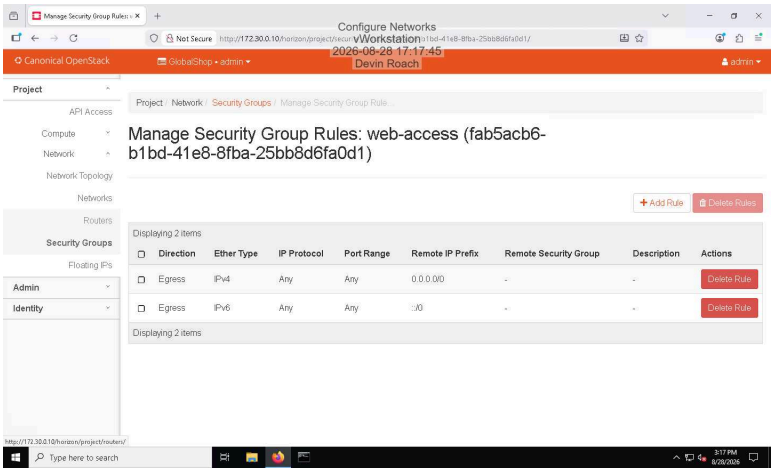

26. **Make a screen capture** of the **console output showing an IP in the 192.168.100.X range**.

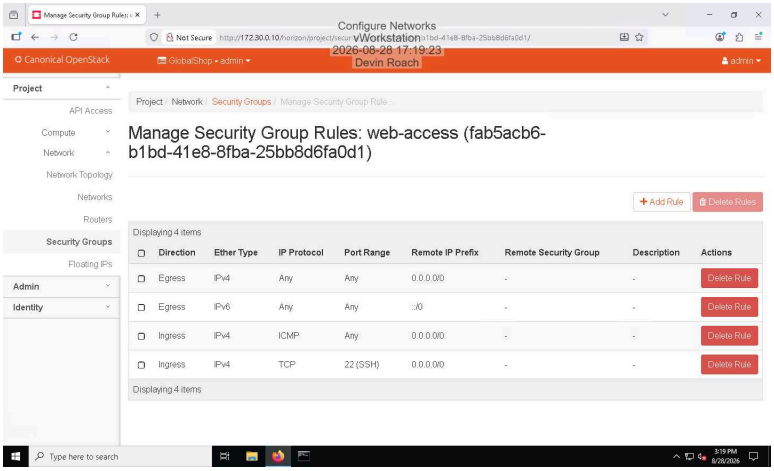

Part 2: Secure Your Network

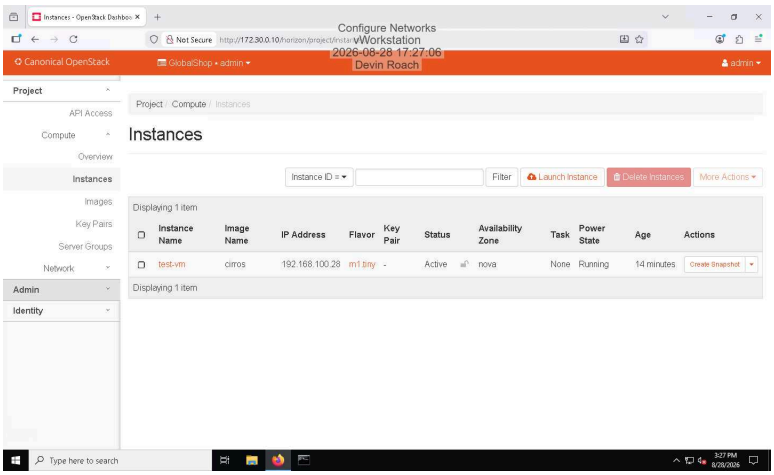

4. **Make a screen capture** showing the **web-access security group list of default rules**.

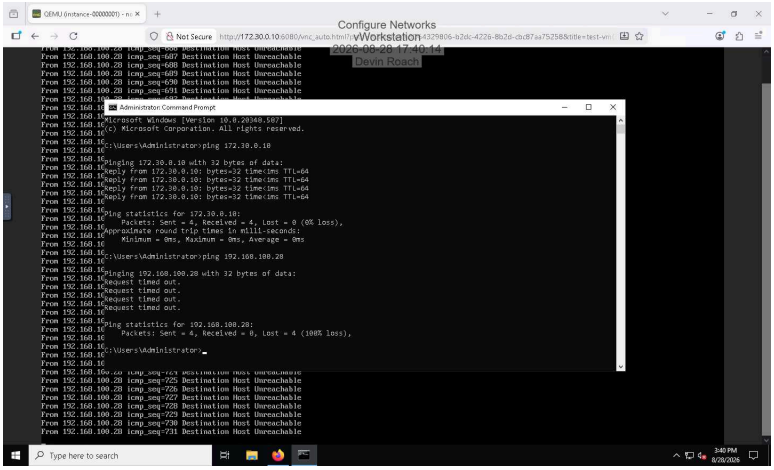

9. **Make a screen capture** showing the **web-access rules screen showing the ICMP and TCP port 22 rules**.

15. **Make a screen capture** of the **instance details showing web-access attached as an active security group**.

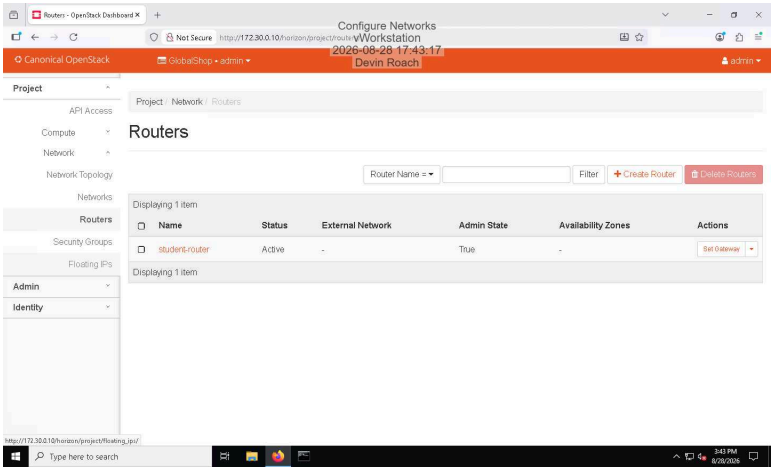

19. **Make a screen capture** of the **console window showing a successful ping to itself**.

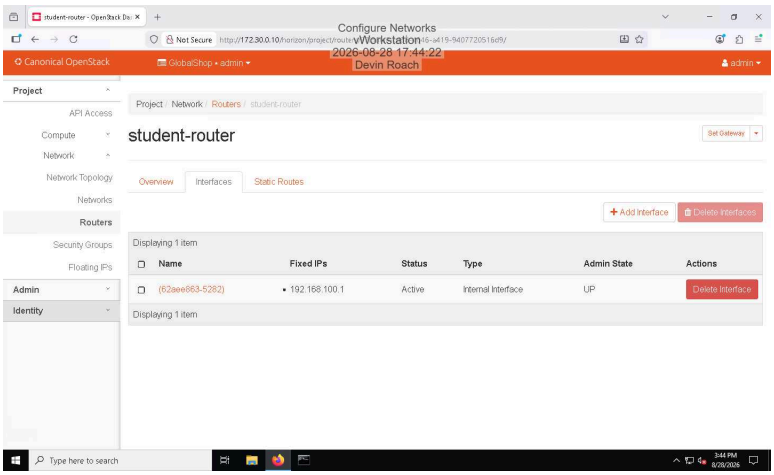

Part 3: Add a Router

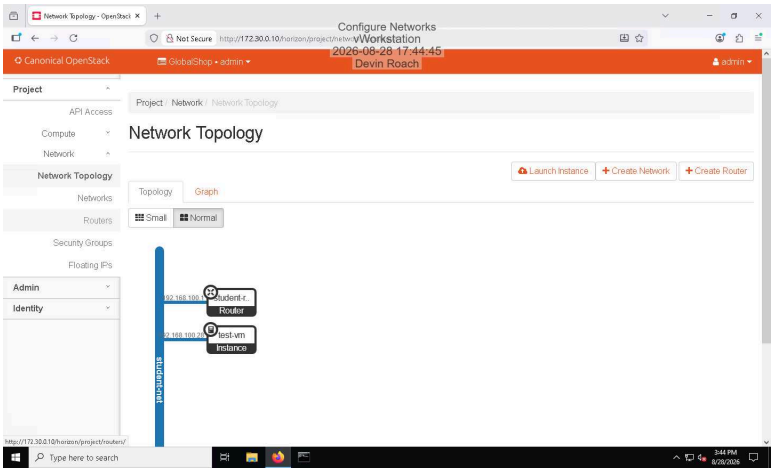

4. **Make a screen capture** showing the **student-router listed under Project > Network > Routers with Admin State "True"**.

9. **Make a screen capture** of the **Interfaces tab of student-router showing student-subnet as an attached interface**.

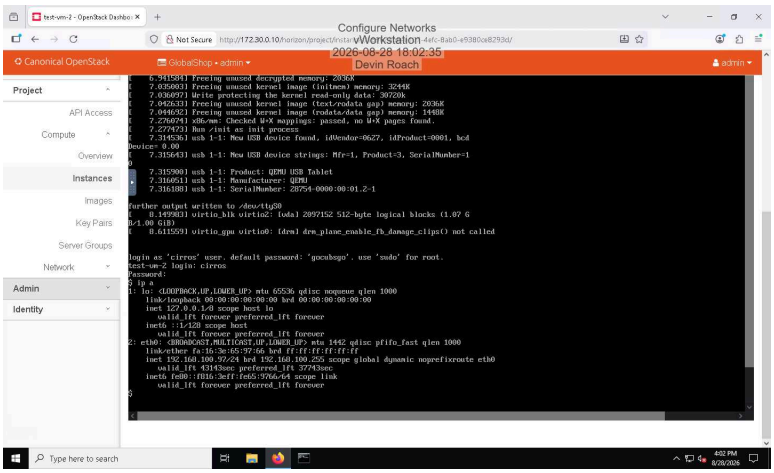

11. **Make a screen capture** of the **visual Network Topology view showing the router, connected subnet, and the test-vm instance**.

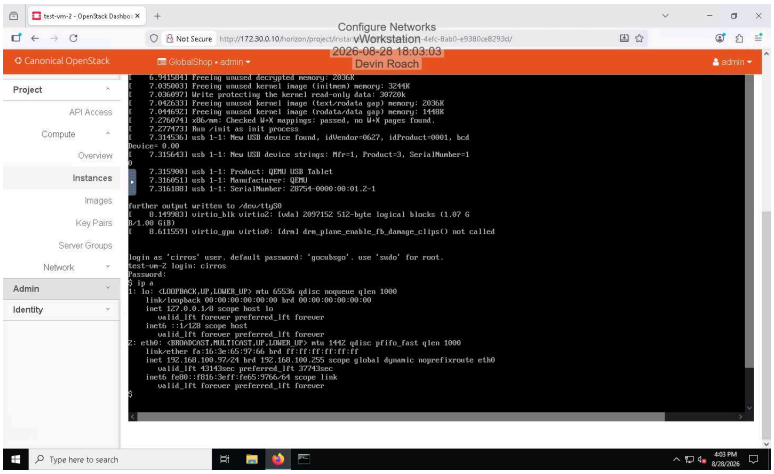

Section 2: Applied Learning

Part 1: Create a Second Internal Network

12. **Make a screen capture** from the **test-vm console showing its internal IP in the 192.168.100.X range**.

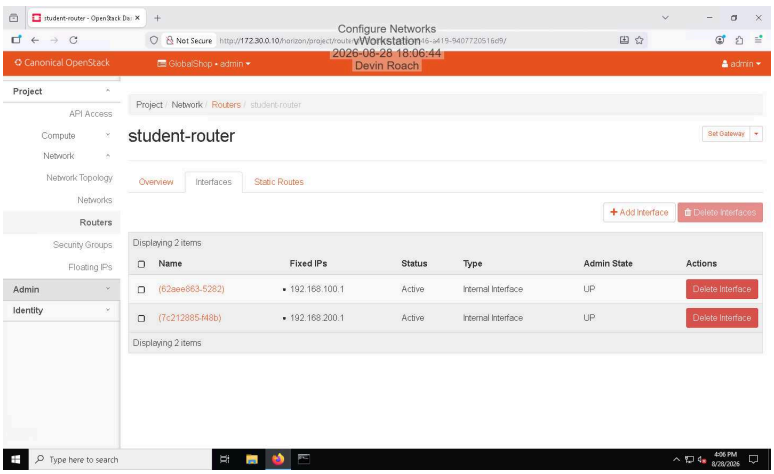

13. **Make a screen capture** from the **test-vm-2 console showing its internal IP in the 192.168.200.X range**.

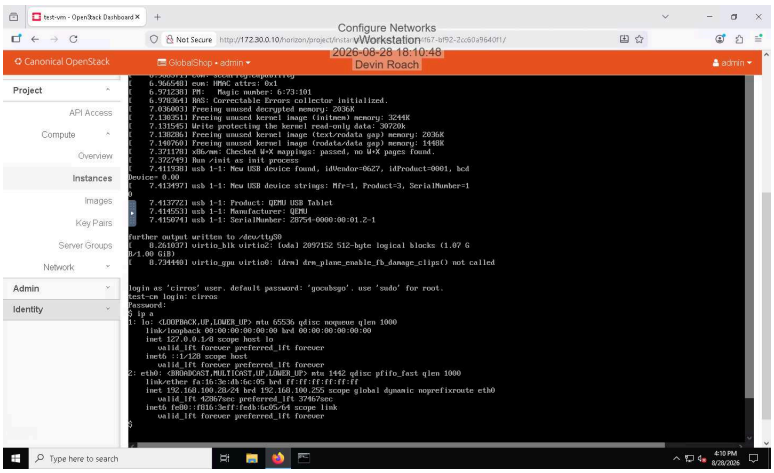

Part 2: Connect the Two Networks with a Router

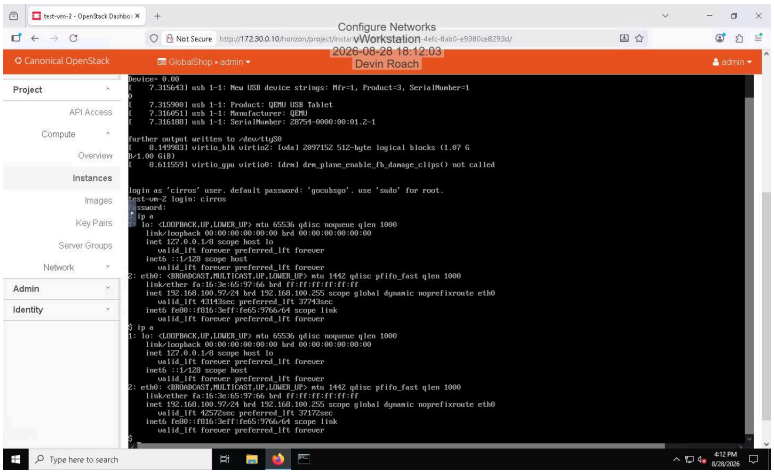

4. **Make a screen capture** of the **Interfaces tab of student-router showing both student-subnet and student-subnet-2 attached**.

6. **Make a screen capture** of the **test-vm console showing a successful ping to test-vm-2's internal IP**.

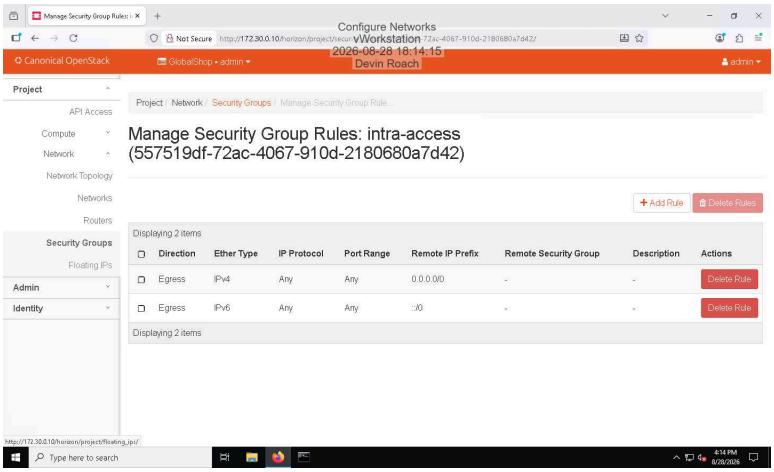

8. **Make a screen capture** of the **test-vm-2 console showing a successful ping to test-vm's internal IP**.

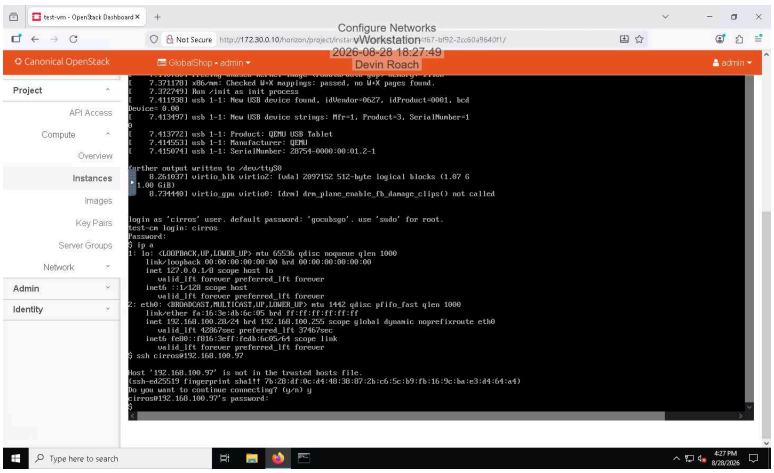

Part 3: Create a Security Group for Internal Communication

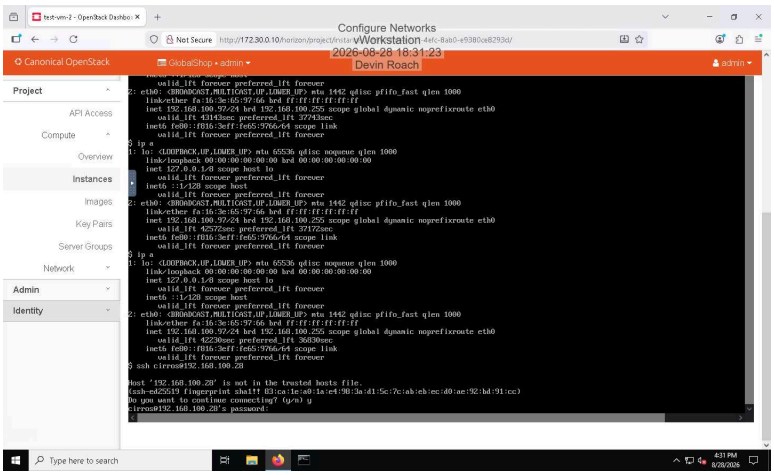

3. **Make a screen capture** showing the **intra-access security group visible in the Security Groups list**.

12. **Make a screen capture** of **test-vm console showing a successful ping and SSH to test-vm-2 using its internal IP**.

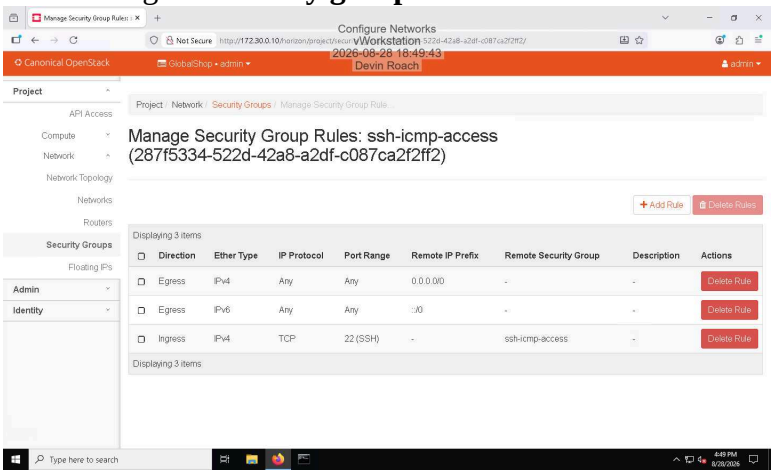

14. **Make a screen capture** of the **test-vm-2 console showing a successful ping and SSH to test-vm using its internal IP**.

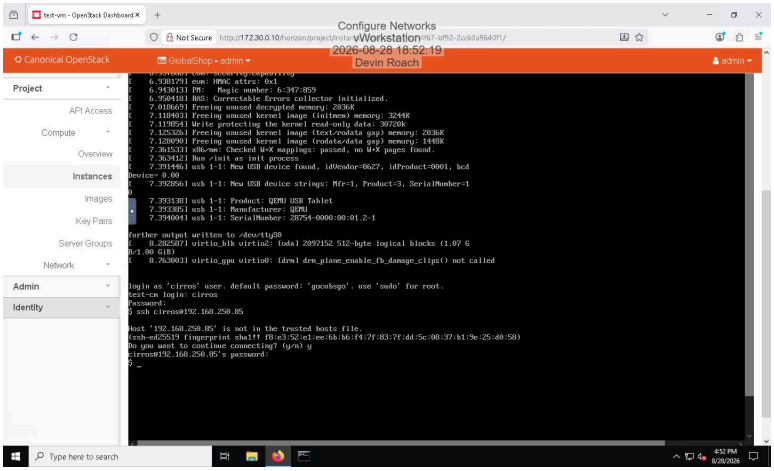

Section 3: Challenge and Analysis

Part 1: Isolate and Harden a Network Segment

6. **Make a screen capture** showing the **security group rules**.

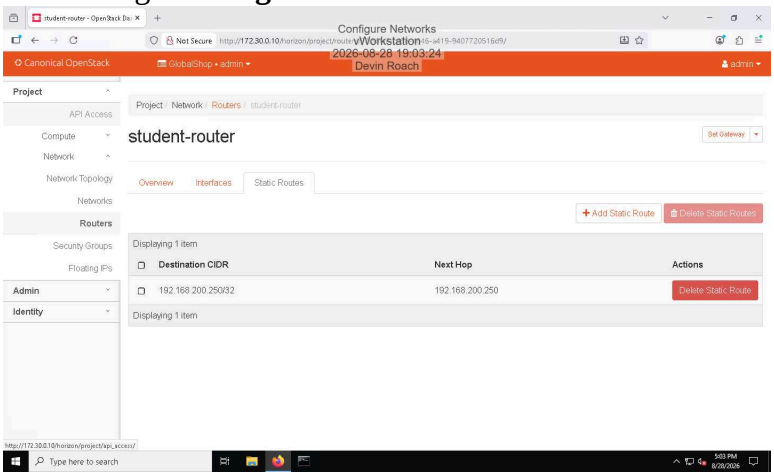

7. **Make a screen capture** showing the **successful test from test-vm to dev-vm**

Part 2: Assign a Static IP and Rebuild Access

6.Make a screen capture showing the **assigned static IP**.

7. Make a screen capture showing the **successful ping or SSH test results** from test-vm
